

Brian Muchiru Mwangi

Software Developer

📞 0115204569 ✉ brayo2933@gmail.com 📍 Nairobi, Kenya

PROFILE

Software developer and founder of Kreative Studio, with hands-on experience building full-stack web applications for real clients and personal ventures. Skilled across the modern JavaScript ecosystem (React, Next.js, Node.js) with a strong focus on financial and business-management tools — from point-of-sale systems to fintech platforms — often integrating cloud databases, real-time sync, and secure authentication. Combines practical development skill with a background in economics and finance, allowing for a strong understanding of the business logic behind the products built.

EXPERIENCE

Founder & Lead Developer — Kreative Studio

Ongoing

- Run an independent software and design studio, delivering custom web applications and digital design work for clients.
- Rebuilt the studio's own portfolio site with a premium editorial design, KES-denominated service packages, and an integrated contact/lead-capture form.

Lead Developer — Retail POS & Order Management System (Anns Interior Decors)

2026

- Solo developer on a commissioned point-of-sale and order-management system for a retail client, built with Next.js, Tailwind CSS, Supabase, and deployed on Vercel.
- Owned the project end-to-end, from requirements gathering through architecture and deployment planning.

Developer — ClubVault

2025 – 2026

- Built a browser-based financial management system for club treasurers using React and Vite.
- Migrated data storage to Supabase and implemented Supabase Realtime for live multi-user sync.
- Deployed via Netlify with GitHub integration, and implemented secure password hashing using Supabase Edge Functions.

Developer — SmartPOS Lite

2025

- Built an offline-first React point-of-sale and inventory management app aimed at small food kiosks and campus vendors.
- Implemented a 4-digit PIN authentication system and local-first data storage for reliable offline use.

Developer — Chama Finance Platform & VaultSync

2025

- Designed and built a digital savings-group management platform twice, once on React/Firebase and once on a Node.js/Express/MongoDB stack, covering loan management, credit scoring, and mobile-money integration planning.
- Built VaultSync, a Next.js-based finance management system tailored for organizations such as school clubs and SACCOs.

FEATURED PROJECTS

- **NSE Investment Tracker** — A personal PWA (HTML/CSS/JS) tracking Kenyan equities (Safaricom, KCB, Equity Bank) with price alerts, dividend tracking, and Chart.js visualizations.
- **Ziidi Trading Journal** — A React application for trade journaling with Recharts-based analytics and emotional pattern tracking for traders.
- **Security Audits** — Conducted independent security audits of a Firebase/Vite/React finance app and a campus marketplace platform, identifying and documenting vulnerabilities.
- **JARVIS-Inspired Dashboard** — An interactive personal dashboard project exploring creative UI and voice/command-driven interfaces.

TECHNICAL SKILLS

Languages

JavaScript, TypeScript, HTML, CSS

Styling

Tailwind CSS, Responsive/Editorial Design

Deployment

Vercel, Netlify, GitHub

Frameworks

React, Next.js, Vite, Node.js, Express

Backend & Data

Supabase, Firebase, MongoDB, Edge Functions

Other

PWA Development, Real-time Sync, Chart.js/Recharts

EDUCATION

Kenyatta University

Economics & Finance-related coursework
Business Finance, Financial Instruments & Risk Management, Economic Development, Macroeconomic Theory

INTERESTS

NSE Equities Trading & Investing · Kenyan Fintech · Community Finance Tools
